Proposal Summary - SomCoffee& Restaurant Website with Shopping Cart Integration

Dear Mohamed Abdullahi,

I'm thrilled to present a concise overview of our proposal for **the SomCoffee& Restaurant** website, now with the addition of a shopping cart feature. Our primary objective remains to develop a website that showcases the restaurant's offerings effectively while ensuring a seamless and enjoyable user experience. Here's an outline of our proposal:

1. **Dynamic Pages:** The website will feature dynamic pages tailored to specific functions:
   - **Home Page:** Offers a quick overview of the restaurant, including its name, logo, contact information, and operating hours. It will also include links to other sections of the site such as the menu and reservations.
   - **Menu Page:** Displays the restaurant's menu items with descriptions and prices.
   - **Order Page:** Allows customers to place orders by selecting items, specifying quantities, and adding any special instructions.
   - **Reservation Page**: Enables guests to reserve tables by selecting a date, time, and party size.
   - **Staff Page:** Provides information about the restaurant's staff, including their roles, schedules, and contact details.
   - **About Us Page:** Offers insights into the restaurant's history, values, and mission.
   - **Contact Us Page:** Includes essential contact information for the restaurant, along with a form for inquiries or feedback.
2. **Enhanced Functionality:** We will leverage jQuery and JavaScript to incorporate interactive features and dynamic elements, enhancing user engagement.
3. **Dynamic Content:** Utilizing effects like hiding, fading, and showing, we will create an immersive experience that responds to user actions.
4. **Conditional Styling:** Through JavaScript and CSS, we will ensure that specific site elements change appearance based on user interactions, enhancing visual appeal.
5. **Form Validation:** All forms on the site will include built-in validation checks to ensure that users input information correctly, contributing to smoother operations.
6. **Dark/Light Theme Options:** Users will have the flexibility to choose between dark and light themes to personalize their browsing experience. Once a theme is selected, it will persist across future visits to the site.
7. **Shopping Cart Integration:** A shopping cart feature will be added to the website, allowing users to add menu items to their cart for easy ordering and checkout.

Our target completion date for this project is April 2024, encompassing the entire development process from page construction to testing and team training. We are confident that these dynamic pages, now with the addition of a shopping cart, will streamline operations for the restaurant and enhance the overall experience for its customers.

Thank you for considering our proposal. Should you have any inquiries or require further information, please do not hesitate to contact us.

Best regards,

Nor Mohamed Hussein Front End Developer   **Spondias Tech**
